

KCO STYLE DOUBLE (CHIP) KNIFE HOLDER ASSEMBLY

for use with Scheffer + Global Web Finishing rotary cutters

KCO Style Double (Chip) Knife Holder Assembly

Features

- Can be configured to take chip cuts between 1/4" (.250") to 1/2" (.500") in size within a single knife holder.
- Dual function knife holder: can be utilized as a single (chop) cut knife holder with the removal of the chip spacer and front plate.
- Includes all internal hardware (modified tab plunger, barrel insert, set screw and spring), chip spacer, and front plate.
- Utilizes standard replacement cutting blades.

Advantages

- Fast make-ready: mount only one knife holder, instead of two, when taking chips.
- Make-ready chip area with a single strip of foam rubber. Save time and money by drastically reducing the need to cut, fold, trim, etc. multiple layers of foam rubber.
- Greatly assists chip placement onto stripper pins for successful and consistent chip removal.
- Provides for a rapid changeover of replacement cutting blades without removing the holder from the knife cylinder.

***Available in multiple lengths
and circumferences****
